

Hatch 2027

Building skills that work for you

Skills I use

Sunlight

Research, design QA, and recurring analysis

Skills I use

Research and learning

Creative work

Custom workflows

If you had to hire an intern to help you with your job, what would their role be?

About me — TODO

My projects — TODO

Agenda

Try the tools

Build a skill through three versions

Choose your next workflow

Tech Check

- A laptop, browser, and coding agent
- Access to the workshop files
- A shared reference and model

Intro to Codex & Claude Code

A working folder and a fresh task

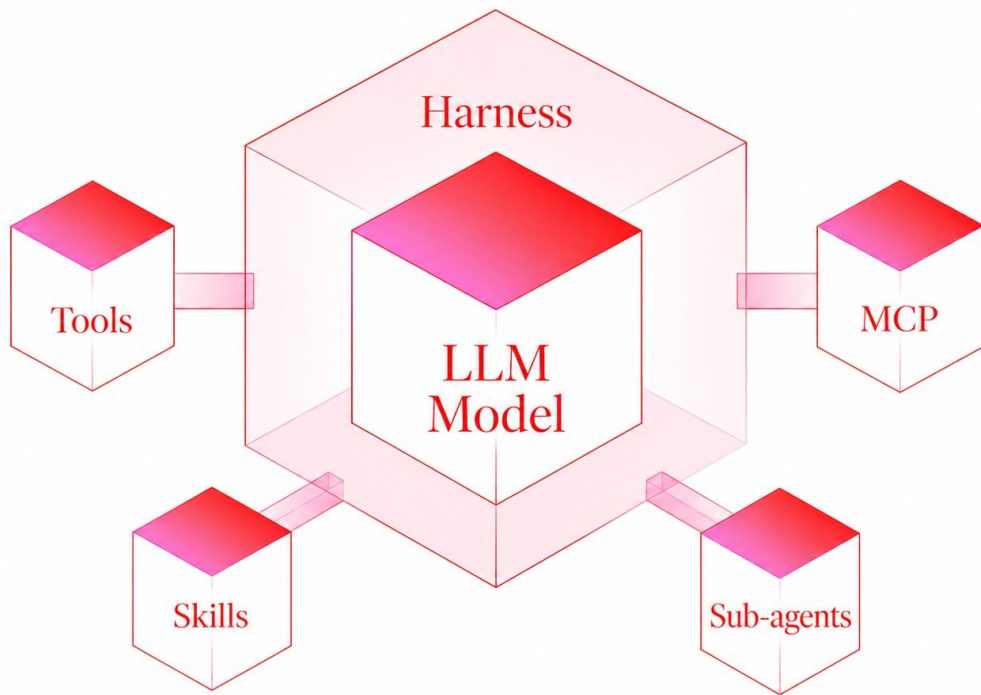

- Your agent works with the files you give it
- Preview changes in the browser
- Start a fresh task when testing a skill

Tools of AI

Workshop files

github.com/aswinckr/Hatch

A Harness enables AI models to take action

CONCEPT #1

Skills are reusable instruction
files your agent can read
when a task matches

Skills Demo

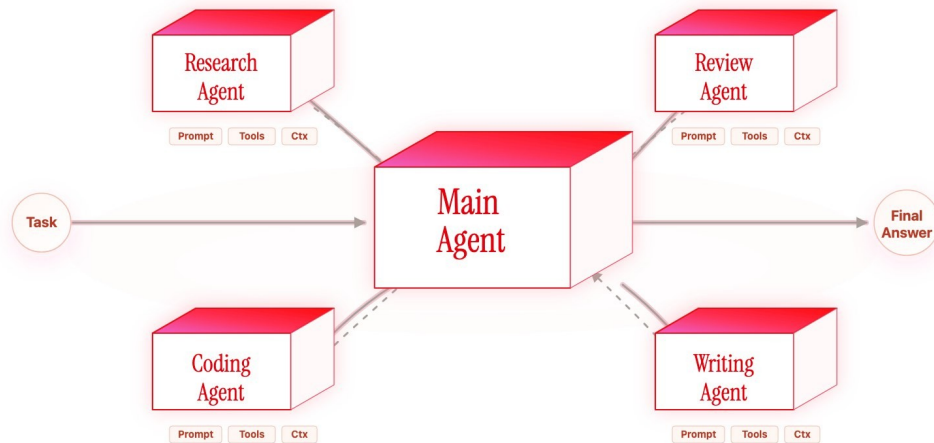

- ☐ [Finding a skill](#)
- ☐ Installing a skill
- ☐ Running a skill

Your Turn:

Install impeccable skill and
redesign the starter site

CONCEPT #2

Subagents can handle a focused task separately

Subagents Demo

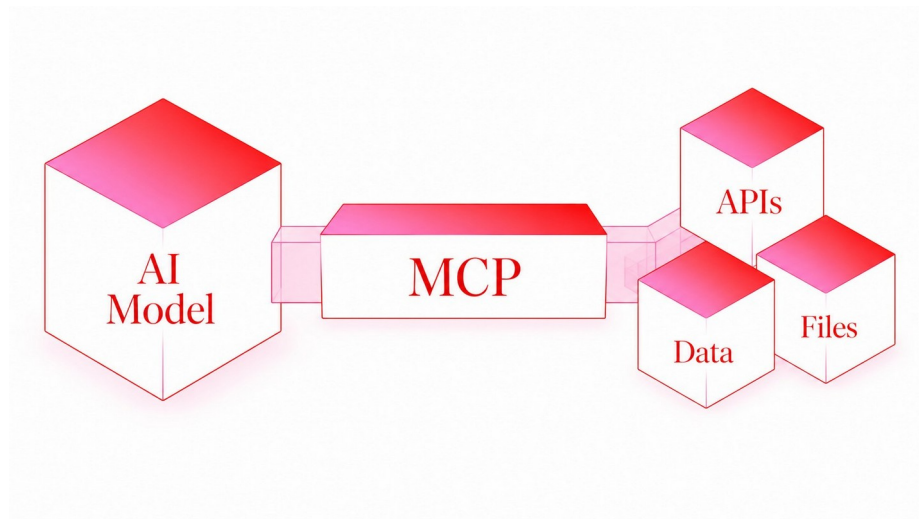

- ☐ Creating a subagent
- ☐ Calling a subagent

Your turn

Review the page from a first-time visitor's
perspective

CONCEPT #3

MCP connects your
agent to external tools

MCP Demo

- ☐ Installing an MCP
- ☐ Running an MCP

Your Turn:

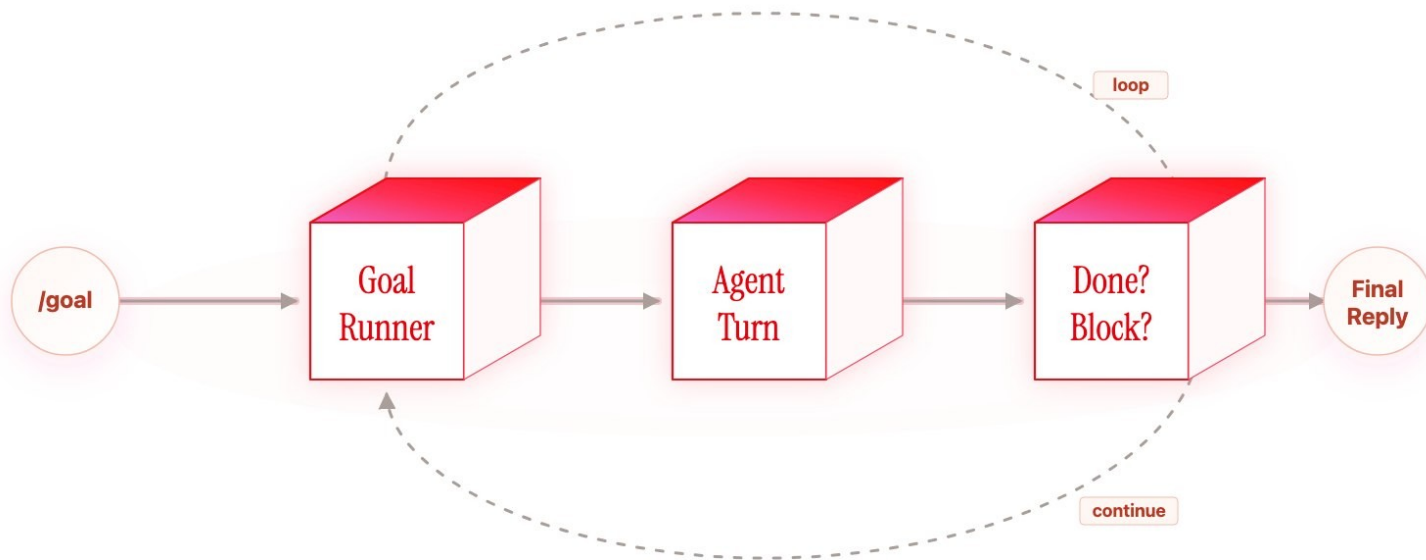

Push your impeccable design
to figma using MCP

CONCEPT #4

Commands are ‘/’
triggered workflows

-  Archive Archive the current chat
-  Compact Compact this chat's context (4...
-  Fast Turn off Fast and return to standard ...
-  Feedback Send feedback about this chat
-  Fork chat Fork this chat
-  Goal Set a goal to keep pursuing
-  Init Create an AGENTS.md file with instru...
-  MCP Show MCP server status
-  Model GPT-5.6 Sol
-  Pet Wake or tuck away the desktop pet
-  Plan mode Turn plan mode on

/goal

Bad Goal

Make the page look more premium.

Good Goal

Make the main action easy to find, then verify that it works

Goal Demo

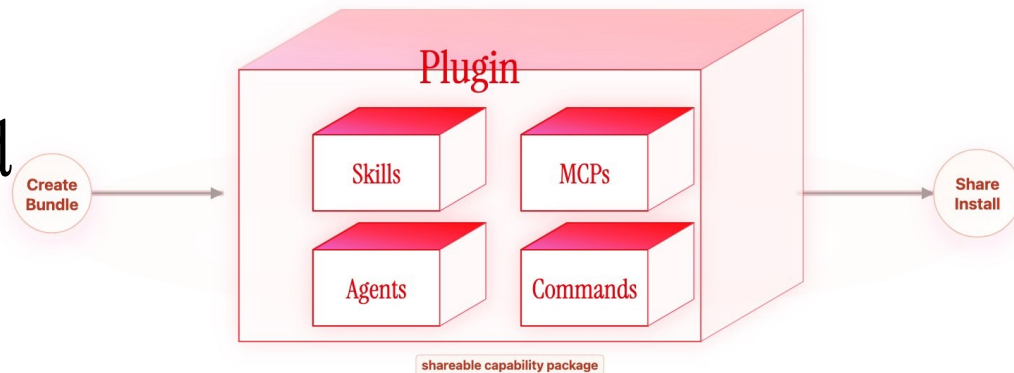

- ☐ Writing a test case & setting up a /goal

Your turn

Improve one action, then check it again

CONCEPT #5

Plugins package skills and tool connections

Plugin Demo

- ☐ Installing from plugin marketplace
- ☐ Calling a skill from a plugin

Your turn

Give one animation a useful job

Introduction To Skills

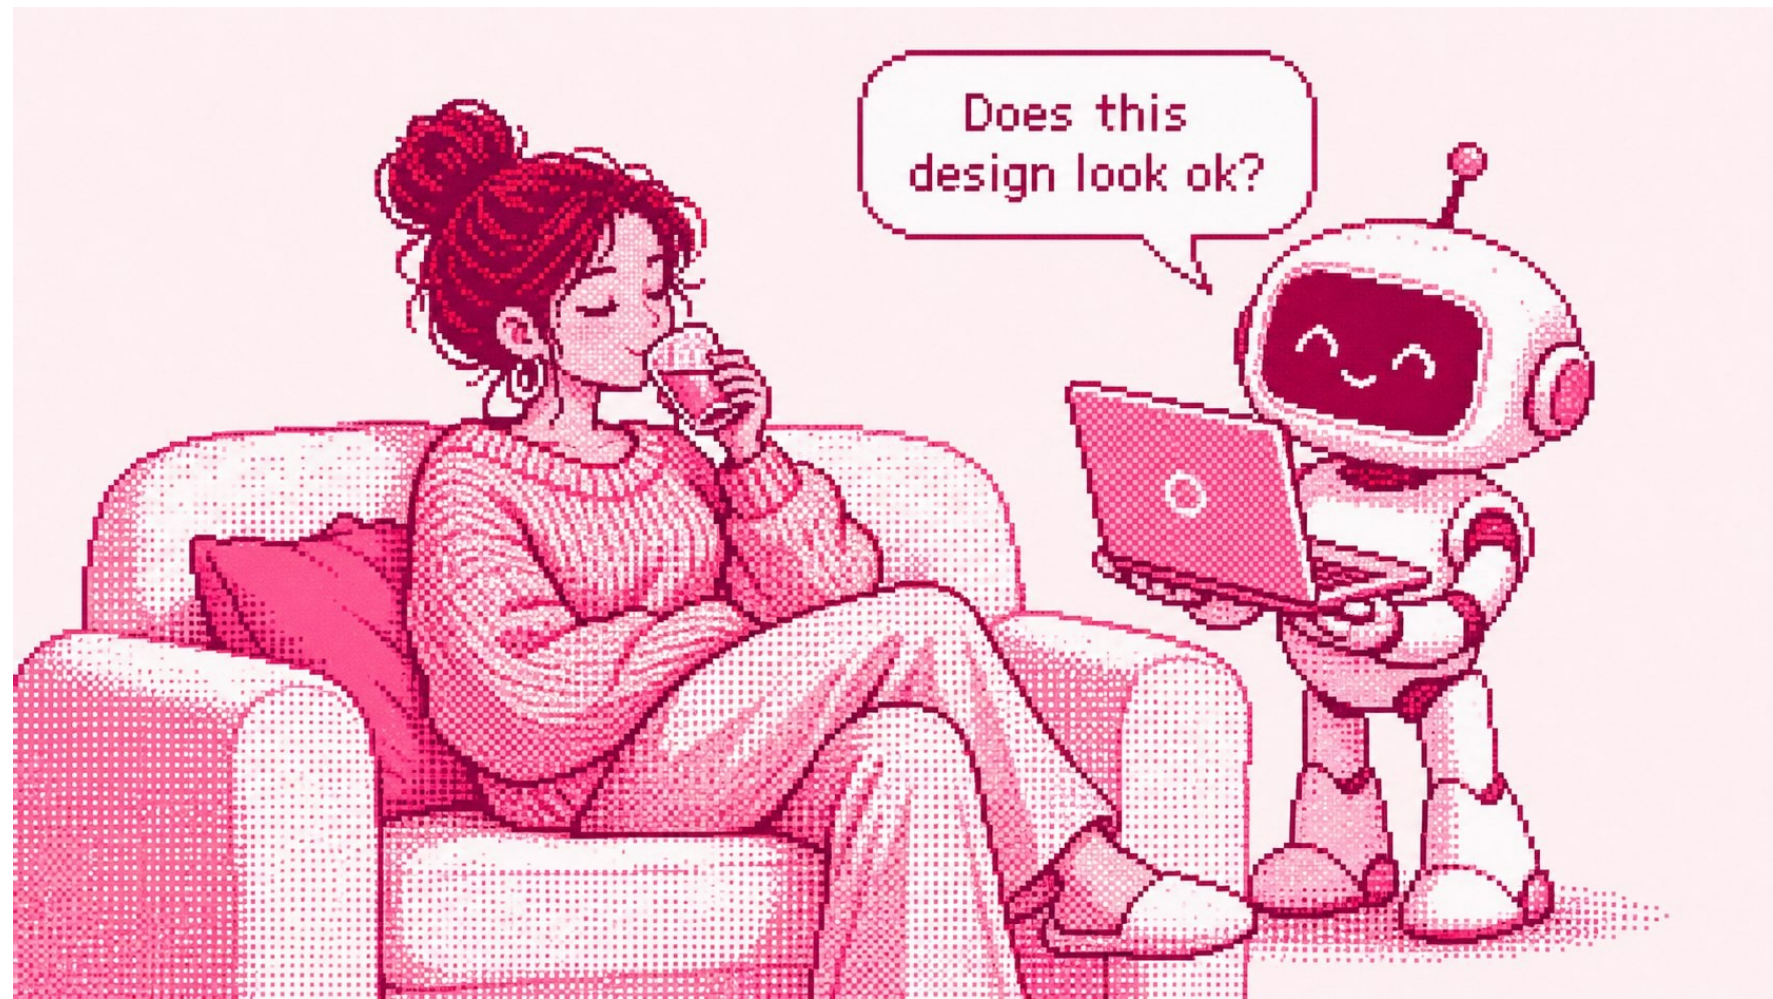

We just did a few things...

1. You used a skill to change a page
2. You reviewed the result
3. Now you will teach your own process

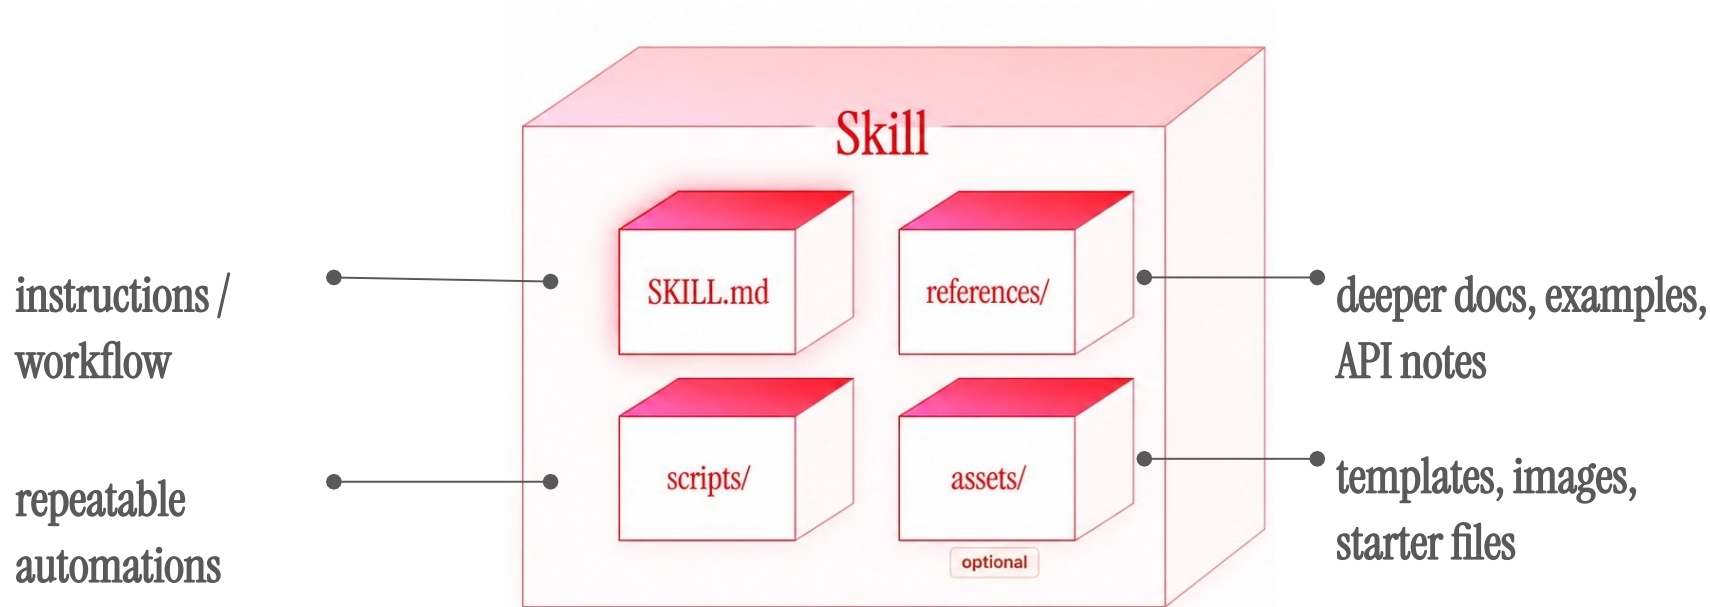

Which task would you teach a skill?

Productizing yourself

Anatomy of a Skill File

A real skill file

The instructions behind the behavior

Let's build a design QA skill

The design QA exercise

- Compare a rendered screen with its reference
- Show the differences you can verify

Improve the instructions across three versions

Let's one-shot this

Create, run, and review version 1

Version 2: teach your process

Advise your intern

- Explain the checks you normally leave unsaid

Watch me work

- Demonstrate one comparison, then extract the method

List 'em first

- Review the checklist before running version 2

Version 3: make it reusable

Anti-patterns

- Show a mistake and teach the replacement behavior

When should this skill run?

- Choose an explicit request or a matching task

The main steps and the references

- Keep the workflow clear and link detail where it is needed

Steer and prune

- Keep the instructions that change the behavior

What will you teach your skill
next?
